## May 2019

### James Hardie Change to Weather Barrier Requirements behind Lightweight Clad

From May 2019, James Hardie will only allow the use of vapour permeable sarking behind Lightweight Cladding products in BCA Climate Zone 2 to 8 and vapour barrier sarkings in tropical BCA Climate Zone 1.

This means Class 2 (Medium) Vapour Barrier sarkings are no longer suitable for use behind James Hardie Lightweight Cladding, including Thermoseal Wall Wrap Prime, in BCA Climate Zones 2 to 8.

The classification table published by James Hardie in May 2019 outlines that all wall wrap products used behind James Hardie cladding in BCA Climate Zone 2 to 8 must be classified as a 'Water Barrier' and 'Class 3 or 4 Vapour Permeable'.

### Bradford Enviroseal Weather Barrier exceeds the James Hardie Specification

Bradford Enviroseal wall wrap is classified as a 'Water Barrier (High)' and 'Class 4 Vapour Permeable' and is suitable for use behind all James Hardie™ Lightweight Cladding.

Bradford Enviroseal wall wraps are also compliant behind all other facades including Brick Veneer, Hebel® and all types of Cemintel®, Weathertex, FC Sheet, Foam, Timber and Metal Sheet cladding. A full list of compliant cladding brands is provided in our Enviroseal Cladding Compatibility Flyer.

To make sure you're compliant behind all types of external cladding Enviroseal vapour permeable wall wrap is the ideal product solution for all applications.
