A Protective Second Skin™

CSR

Protect your home with Thermoseal™ Wall Wrap

Your bricks are a beautiful and tough exterior, but Wall Wrap is the hidden second skin™ that provides extra protection.

A Protective Second Skin™

DURING BUILDING

Thermoseal Wall Wrap provides a protective weather barrier that shields the house frame from rain and allows trades to commence internal work before brick walls are completed.

There's only one opportunity to install Wall Wrap and that's during construction.

ONCE YOUR HOME IS COMPLETE

Thermoseal Wall Wrap becomes a protective second skin™ within your walls, making your home more comfortable and energy efficient by reducing draughts, limiting moisture entry and providing a radiant heat barrier when installed adjacent to an air gap.

- **Reduce draughts.** Thermoseal can reduce air infiltration through the wall frame and around wall insulation batts. Reducing air infiltration makes a home more comfortable and helps insulation work more efficiently.
- **Reduce moisture entry.** Thermoseal can reduce moisture entry through the wall helping prevent structural damage to the frame and allowing the wall insulation batts to perform at the specified R-Value rating.
- **Increases energy efficiency.** Thermoseal helps a home improve its energy efficiency by protecting the wall insulation batts from draughts and moisture entry. The overall R-Value rating of a wall can be boosted when the reflective face of Thermoseal is positioned adjacent to an air gap. If walls are filled with insulation batts it's recommended that Thermoseal Wall Wrap XP is used.
